

Shifting boundaries **IN ON-FARM GRAIN STORAGE** with **neXgro** Grain Management.

Traders and Mill Focus

What is neXgro accreditation?

neXgro accreditation is a new standard of quality assurance that opens up the market for traders and mills to access producers with on-farm grain storage (OFGS).

How does accreditation benefit producers?

For neXgro's community of OFGS farmers, it promises better ongoing returns and benefits. Until now, prices paid for all grain stored on-farm have been automatically reduced by 1% for quality that is as good as, if not better, than that of traditional co-op storage facilities. neXgro accreditation eliminates this loss with milldoor delivery at accredited mills and allows our producers to compete directly with co-ops and explore opportunities in a market that is considerably easier to access than before.

How does accreditation benefit traders and mills?

Both traders and mills enjoy the freedom of negotiating without the bureaucracy of the traditional co-op system.

By guaranteeing the quality and quantity of grain, neXgro accreditation ensures that every buyer enjoys peace of mind while taking advantage of the efficiencies that OFGS offers.

Outloading benefits include increased speed, flexible outloading hours, and modern infrastructure. This ensures that more outloading slots can be serviced per day.

Ensuring year-round availability also becomes simpler through a consistent, transparent flow of accredited grain through neXdeal.

neXgro OFGS offers financial benefits to buyers through better neXdeal pricing opportunities and by reducing buffer inventory requirements, lower cumulative day tariffs, and eliminating standing costs with quicker turnaround times at our farm silos.

(OFGS & Safex Grain)

Traders and mills can trade on the neXdeal platform with farmers whose OFGS grain is neXgro-accredited with the same confidence and peace of mind as with Safex registered silos.

neXgro guarantees accredited grain and better market access.

Why should you join the neXgro OFGS value ecosystem?
